Read more Windows 10 has its own video editor. And no, it's not Windows Movie Maker that went to Microsoft's app grave years ago. No, it's not the Movies & TV that received editing features in 2017, the ones that disappeared. The built-in video editing app in Windows 10 is Photos. Maybe you noticed one of the major system updates this year or maybe not. But in the Photos app there's a special button for the video, and that's the total promotion Microsoft has done there, so far. There it has been behind a pretty decent video editor for a year, this server, which has been examining all the features of Windows 10 for a year to perform different analyses, had completely forgotten this novelty of Microsoft's latest operating system. In my defense, in its early versions it was basically a slideshow editor that would automatically create videos with your photos and that's it. The hidden 'Video Editor' In my defense too, Microsoft has made almost no effort in publicize this tool. Except this week, when they decided to give him the honor of a mini documentary they posted on YouTube telling the story behind the creation of 'Video Editor'. 'Video Editor', this extremely generic name is the one that brings the relatively new video editing application of Windows 10, which doesn't even have its own launcher in the app menu and you'll never find doing a search from the start menu. The result you will find will be: Photos. And we can't blame anyone for feeling a little confused. The good news is that throughout the year Microsoft has been dedicated to improving this application, only these improvements go very unnoticed. And 'Video Editor' allows us to do many things in the style of the old Windows Movie Maker, even better, at least according to Microsoft. In August they added drag and drop to add supports, added more text styles, split and rotate, duplicate video projects, and more. The Windows 10 video editor in all its glory also includes background music to easily add, or you can add your own files, you can synchronize projects with OneDrive, you can add themes that are like image filters to the video, you have 3D effects, play speed changes, motion effects and many varieties of text. If you are interested in learning more, there is even a video tutorial explaining how to use it, a video that has just over 2000 views. This means that probably more than 899,997,000 Windows 10 users do not They saw. Free video editors hay muchos, but count with something in the windows mismo and sea relatively easy to use always something bueno. If you were one of those who did not know that esa herramienta was at your disposal there, quizás te interese echarle un vistazo.
